

Log in to your GoDaddy account.

Go to My Domains.

Click on the domain you wish to transfer.

Scroll down until you see the Additional Settings section. Click on Transfer domain to another GoDaddy account.

Enter the information provided to you by CourseVector in the appropriate fields.

Make sure you indicate that you want to copy the current domain contact information to the new account. Failure to do this will add several extra steps to the process as well as significant time.

Once you have completed the information click the Transfer Domain button.

Transfer from your GoDaddy account

Action Needed
You are transferring webdesignerharrisburg.com from your account.

Which account is this going to?
Owner's email address *

CourseVector provided you with this Email address

Re-enter owner's email address *

CourseVector provided you with this Email address

Customer # (optional)

CourseVector provided you with this Customer #

Do you want to copy the current domain contact information to the new account? *

Yes

No

Transfer Domain **Cancel**

You should see the indicated screen that your transfer was successful.

That should be all there is to it. CourseVector will confirm once they have received the domain.

Transfer from your GoDaddy account

✔ Your transfer is in progress. After it's complete, the domain will not display in your domains list.
